

NEVIL DHARSANDIYA

Cloud Computing (AWS) & FinOps | Full-Stack & AI Development | Software Engineer

Rajkot, Gujarat, India | +91 8128854335 | nevil.dharsandiya@gmail.com

PROFILE SUMMARY

Computer Engineering graduate with hands-on project experience across the MERN stack, applied machine learning, and security/forensics tooling, now building skills in cloud computing, AWS, and FinOps (cloud cost and commitment management). Hybrid hardware-and-software background (prior Diploma in Mechanical Engineering) and a foundation in networking, databases, and data structures. Comfortable learning new technologies quickly and collaborating in team settings; seeking a role applying full-stack, AI, and cloud/FinOps skills to real-world products.

EDUCATION

B.Tech, Computer Engineering — Marwadi University, Rajkot, Gujarat

2023 – 2026

TECHNICAL SKILLS

Languages & Frameworks: C, Python, Java, JavaScript, HTML & CSS, Node.js, React.js

Cloud & FinOps: AWS (EC2, S3, IAM basics), Cloud Cost Management, FinOps Fundamentals, Cloud Spend & Commitment Optimization (EDP/MACC concepts), IBM Cloud Fundamentals

AI & Machine Learning: Deep Learning, CNN, ResNet, EfficientNet, Model Evaluation (Accuracy, Precision, F1-score)

Databases & Tools: MongoDB, MySQL Workbench, SQLite, MS Office

Security & Forensics: Tkinter, dnspython (SPF/DMARC), ADB, digital forensics (chain of custody, SHA-256)

PROJECTS

Cloud (SaaS) & AI Spend Intelligence Platform

- Building a B2B SaaS platform that helps enterprises reconcile hyperscaler marketplace spend against large commitment contracts (EDPs/MACCs) to catch credit and visibility gaps with agentic AI.
- Designed 10 core product use cases, led market validation through direct outreach to 20+ FinOps practitioners and consultants,
- Built synthetic test datasets and contract artifacts (AWS CUR 2.0 schema, EDP contract documents) to validate the product's reconciliation engine.

Email Header and Spoof Detection Engine

- Built a clean, multi-tabbed GUI in Python (Tkinter) for opening email files and viewing categorized analysis results.
- Engineered a forensic engine cross-checking From vs. Return-Path fields and a risk-scoring algorithm (SAFE / MAYBE RISK / HIGH RISK).
- Integrated dnspython for live SPF/DMARC DNS lookups, and a MIME parser to flag suspicious links and attachments.

Mobile Device Forensic Automation Suite

- Engineered a cross-platform Python pipeline using ADB for Android and iTunes backup parsing for iOS, unified under one interface.
- Automated extraction of SMS/iMessage logs, GPS history, call logs, and social media caches; applied SHA-256 hashing for chain-of-custody integrity.
- Designed an SQLite schema to normalize extracted artifacts, with automated HTML report generation for investigators.

Research Project: Image Classification on Animal & Vehicle Datasets

- Implemented and benchmarked CNN, ResNet, and EfficientNet architectures on the CIFAR-10 dataset for animal vs. vehicle image classification.
- Performed data preprocessing and augmentation, then evaluated each model on accuracy, precision, and F1-score to compare depth, efficiency, and generalization trade-offs.
- Findings inform potential applications in autonomous vehicles and intelligent visual systems.

CERTIFICATIONS & TRAINING

Cloud Computing (IBM) • Python & Data Structures (University of Michigan) • SQL Database Programming (Oracle Academy) • Enterprise Data Science (IBM) • NDG Linux Essentials, Introduction to Networks, Switching/Routing/Wireless Essentials (Cisco Networking Academy)

CORE STRENGTHS & LANGUAGES

Communication & Teamwork • Problem-Solving & Critical Thinking • Adaptability & Fast Learning • Initiative & Leadership

Gujarati: Native | Hindi: Intermediate | English: Fluent Speaking & Strong Reader
